

# SNOW GEAR

## LOOK OUT FOR THESE ICONS FOR QUALITY FEATURES...

### WATERPROOF RATING

This independently tested rating, measured in millimetres, tells you how quickly your jacket will become saturated and begin allowing water to penetrate to the layers below. The higher the millimetre level, the more waterproof the jacket is and the longer it will withstand snow and rain. It is a vital characteristic to help you stay comfortable, warm and dry on the slopes

### BREATHABILITY

This independently tested rating, measured in grams/m<sup>2</sup>/24hr, tells you how effective the fabric is at transferring moisture from the inside of the garment to the outside. It is a measure of how many grams of sweat per one square metre can escape a fabric in a 24 hour period. The higher the number, the more breathable your garment will be.

### FULLY TAPED SEAMS

All stitched seams are taped with a waterproof tape that is heat sealed to the interior of the seam. This provides protection against moisture penetration at the seams, which is a very important feature of a quality snow jacket or pant.

### DUPONT™ SORONA® WADDING

This renewably sourced fibre\* is used in our Crane® Snow Extreme outer garments and gloves. It provides superior insulation, breathability, moisture resistance, softness and warmth retention.

\* DuPont™ Sorona® contains 37% annually renewable, plant-based ingredients by weight.

### WIND RESISTANT FABRIC

The outer shell fabric is tightly woven to reduce penetration of wind or cold air, keeping you warmer for longer.

### VENTILATION

Underarm and inside leg ventilation for added airflow and comfort. Vents are mesh lined to enable airflow without air chill.

### SNOW SKIRT AND CUFFS

Located at the hip area inside the jacket and at the ankle inside the pant leg, they prevent snow from entering through the bottom of the jacket or pants, and also feature anti-slip tape to avoid riding up.

### SKI LIFT PASS POCKET

Situated conveniently on the bottom left hand sleeve of our jackets, to keep your pass safe and secure and allow for easy scanning at electronic pass scanners.

### UTILITY POCKETS

Multiple internal and external pockets assist in keeping valuables handy and organised.

### ZIPPERS

These are designed to secure the garment and protect the wearer from cold and wet conditions. All our non-exposed zippers are covered by a storm flap to keep snow, rain or wind from breaking through the tiny spaces in the zippers. All our exposed zippers feature a water-repellent coating to discourage moisture from entering through the teeth.
